Staff Engineer - Milestones & Celebrations

Dear Hiring Manager,

I'm excited to apply for the Staff Engineer position on your Milestones & Celebrations team. Building platforms that positively impact how people experience work aligns with what I find most rewarding in engineering—seeing real users benefit from systems I've helped design.

In my current role as Software Architect, I lead cross-team initiatives building event-driven microservices on AWS. I recently architected a pay-as-you-go insurance platform that scaled to support 1400+ policies in its first four months, using message queues, Kubernetes, and Python tooling. I've also mentored a 12-person team on architecture decisions and code quality, contributing to a 30% reduction in defects through test-driven practices.

I'm drawn to Achievers' engineering culture—particularly the emphasis on owning features end-to-end and driving technical excellence through code reviews and best practices. My experience spans the full lifecycle from system design through production monitoring, and I enjoy the challenge of balancing scalability with reliability as platforms grow.

I'd welcome the opportunity to discuss how my background in distributed systems and technical leadership could contribute to your team.

Sincerely,

Tyler Kuipers
