

## AuditBoard

January 6, 2026

12900 PARK PLAZA DRIVE, SUITE 200  
CERRITOS, CA 90703

### Staff Software Engineer

Dear Hiring Manager,

I'm applying for the Staff Software Engineer role at AuditBoard. The combination of leading architecture decisions, mentoring engineers, and shipping end-to-end product features is exactly what I've been doing for the last few years, and what I want to keep doing.

My stack aligns well with yours: Node.js, TypeScript, Python, and PostgreSQL on AWS. I currently own 4 REST APIs serving 5 teams and external partners, processing \$4.3M in transactions annually. I design API contracts, manage data flow between database models and downstream consumers, and maintain OpenAPI specs. I also architected an event-driven system handling 2.8 million events with 99.9% uptime, which won a 2024 Guidewire Innovation Award.

Writing design documentation and leading architecture decisions is a big part of my current role. I author RFCs, run code reviews, and sit on our Architecture Steering Committee. I mentor engineers on system design and debugging, and I set technical standards for a 12-person team. I care about building products that actually work for customers, not just shipping code.

I don't have production experience with frontend frameworks like Ember, React, or Angular. My depth is in backend systems, APIs, and infrastructure. I learn quickly and have picked up new stacks before, but I want to be upfront about where my experience is strongest.

Testing is something I've cared about for a long time. Earlier in my career I designed a test framework from scratch that reduced defects by 30% and is still in use org-wide 4+ years later. TDD has been part of how I work throughout my career.

I'd be happy to talk more about how my API architecture and technical leadership experience could contribute to AuditBoard.

Sincerely,

**Tyler Kuipers**
