Better Stack *June 10, 2026*

REMOTE

Software Engineer

Dear Hiring Manager,

The AI tooling requirement is what caught my eye. Better Stack's expectation that engineers actively use Claude Code, Cursor, and agentic workflows isn't a bullet-point skill for me, it's just how I work. I've formed real opinions on where these tools speed things up and where they quietly create work. I know when to trust the output and when to reason through the problem myself. Not a vibe coder.

The solo shipping angle also resonated. At AMA I built a self-service developer platform alone that took environment provisioning from 2-3 weeks down to 2 hours (60x): create/destroy, database snapshots, pull-from-prod. I also architected the backend for Canada's first pay-as-you-go auto insurance product: 10 Lambda functions across multiple AWS accounts, 99.9% uptime since launch, $4.3M in annual revenue. I like picking up a hard problem and shipping it.

My backend is primarily TypeScript, Python, and PostgreSQL. At Arterys I built the TypeScript and Node.js services that ran medical AI algorithms on clinical imaging data. Your stack is new to me (Rails, Vue.js), but I pick up web stacks quickly and the fundamentals transfer. I'd be happy to talk more.

Thank you for your time and consideration,

Tyler Kuipers
