### Staff Software Engineer, Developer Ecosystems

Dear Hiring Manager,

I'm applying for the Staff Software Engineer role on the Developer Ecosystems team. The opportunity to build infrastructure and tooling that empowers developers to integrate with and extend your platform aligns directly with the work I've been doing for the last few years.

I've spent 10 years in software development, with the last 3 focused on developer tools, APIs, and infrastructure. I built a self-service platform that reduced environment provisioning from weeks to hours, adopted by 15 engineers across 3 teams. I own API architecture for a platform serving 5 internal teams and external partners, where I design contracts, set standards, and approve endpoint additions. Earlier in my career, I built a test framework that reduced defects by 30% and has been used org-wide for 4+ years.

My background is heavily backend focused (TypeScript, Python, Java). I've worked extensively with REST APIs, microservices, Kubernetes, AWS, and relational databases. I don't have production React or Ruby on Rails experience, which I know are part of your stack. I learn quickly and have successfully picked up new technologies throughout my career, but I want to be upfront that the full-stack aspects of this role would involve a learning curve for me.

What draws me to this role is the focus on developer experience and building tools that multiply the effectiveness of others. I've been on both sides, building platforms and being the frustrated developer waiting for environments or dealing with poorly documented APIs. The shift toward LLM-powered development and building MCP tools is exciting, and I'm eager to contribute to that vision.

I lead through technical vision, RFC authorship, and code reviews rather than authority. I'm comfortable with complexity, mentoring engineers, and collaborating across teams to deliver impact. I'd be happy to discuss how my platform engineering and API design experience could contribute to StackAdapt's developer ecosystem.

Sincerely,

**Tyler Kuipers**
