About Me — I've been writing software for about 10 years, with the last three spent as a technical lead owning architectural decisions and engineering standards for a 12-person team. My most recent C# work is a 2-3 engineer rewrite of a legacy document generation system into containerized ASP.NET Core microservices on .NET 8, with Datadog wired in and deployed on Kubernetes. TDD is genuinely how I work: earlier in my career I designed a test framework that cut defects by 30% and was adopted across the whole insurance engineering team. I write the RFCs that get teams aligned, sit on an Architecture Steering Committee, and treat code quality and mentoring as core parts of the job, not extras.

Work Experience

Alberta Motor Association

Edmonton, Alberta

SOFTWARE DEVELOPER IV

Jan 2023 - Present

- Led a 2-3 engineer rewrite of a brittle legacy C# document generation system into containerized ASP.NET Core microservices (.NET 8). 4-5 services (with sidecars) on a managed Kubernetes cluster, deployed with Helm. Wired up Datadog metrics for failure rate, throughput, generation time, and storage time, replacing a system that had frequent outages. (C#, ASP.NET Core, .NET 8, Kubernetes, Docker, Helm, Datadog)
- Set technical standards for a 12-person team through code reviews, RFC authorship, and PR checklists / API design guides. Authored an RFC moving the team to trunk-based development with feature flags. Worked in cross-functional pods alongside PM, design, and QA. Member of the Architecture Steering Committee, and mentor newer developers through legacy codebases and TDD. (Gosu/Java)
- Own 4 REST APIs serving 5 internal teams and external partners. Designed the contracts and versioning, approve new endpoint additions, and maintain OpenAPI design standards in Confluence. (Python, REST, OpenAPI, TypeScript)
- Architected the infrastructure for Canada's first pay-as-you-go insurance product across multiple AWS accounts. 10 Lambda functions, 99.9% uptime since launch, 2.8M insured trips and 76,637 invoices processed. Won the 2024 Guidewire Innovation Award (1 of 3 worldwide). (Python, AWS Lambda, Terraform, TypeScript)
- Built a self-service developer platform solo that took environment provisioning from 2-3 weeks down to 2 hours (60x). Self-service create/destroy, database snapshots, and pull-from-prod, adopted by 15 people across 3 teams and used to spin up 120+ environments. It made production debugging routine: a cancellation bug nobody could reproduce got root-caused in days using snapshotted production data. (Python, Terraform, AWS, Jenkins, Docker)
- Built an event-driven pipeline that ingests an external partner's policy data: S3 ingestion, a Kubernetes CronJob, a translation service, and transactional calls to a composite API, with OAuth 2.0 auth and Datadog monitoring. (Python, Kubernetes, AWS S3, OAuth 2.0)

Arterys Inc. (Acquired by Tempus Labs)

Calgary, Alberta (Remote)

SOFTWARE DEVELOPER

Aug 2021 - Aug 2022

- Built and maintained backend services that ran medical AI algorithms and returned results to the platform. (TypeScript, Node.js, AWS)
- Improved AI algorithm processing turnaround time using Redis caching and AWS infrastructure optimizations.
- Monitored production systems via Elasticsearch and Kibana, catching and resolving issues before customer impact.

Alberta Motor Association

Edmonton, Alberta

SOFTWARE DEVELOPER | SOFTWARE TEAM LEAD

Jun 2018 - Feb 2021 | Feb 2021 - Aug 2021

- Designed and built automated test framework that reduced defects by 30% on subsequent projects. Adopted across the insurance engineering team (15 developers / all Guidewire projects) and still in use 4+ years later. (Gosu/Java)
- Led 5-6 person development team on Guidewire insurance platform using TDD methodology. Performed Scrum Master role. Delivered projects on time and budget with no critical defects post-launch. Code reviews and mentoring junior developers.
- Led Git migration for 12-15 developers transitioning from SVN. Created Docker image for local Guidewire development environments. Trained 5-6 developers on TDD methodologies through hosted training sessions.

Pleasant Solutions

Edmonton, Alberta

SOFTWARE DEVELOPER

Jan 2018 - Jun 2018

- Built HMI for a concrete plant control system using TDD methodology. Daily work in C# / .NET, heavily utilizing the MVC design pattern, with REST integration and tests written with NUnit and Moq. (C#, .NET, MVC, REST)

Lockheed Martin Canada

Halifax, Nova Scotia

ASSOCIATE SOFTWARE ENGINEER

Jan 2017 - Jan 2018

- Contributed to Data Fusion module for Combat Management Systems, combining data from multiple underwater and above-water sensor sources. (Java, SQL)
- Designed and implemented scenario recorder system that enabled re-running failed test scenarios at will, improving debugging and testing capabilities.

- Built web app for spatial/temporal data visualization (Edmonton River Atlas). (PHP, JavaScript, PostgreSQL, PostGIS)
- Wrote undergrad thesis on spatial-temporal referencing methods.
- Presented research through poster presentations.

Education

The Open University MSC. COMPUTING (SOFTWARE ENGINEERING) Currently pursuing Master's in Computing at The Open University.	Milton Keynes, England (Remote) May 2024 - Ongoing
The King's University B.S. IN COMPUTER SCIENCE	Edmonton, Alberta Sep 2012 - Dec 2016

Skills

Technical Leadership & Design Docs	I write the design docs and RFCs that align a team on the hard calls, including an RFC to move us to trunk-based development with feature flags so we could decouple deploys from releases. I set standards through code reviews, PR checklists, and API design guides, sit on AMA's Architecture Steering Committee, and mentor developers through legacy codebases and TDD. Making the engineers around me better through clear writing and useful reviews is a real part of how I work.
Backend Services & Ownership	I've spent the last three years as the technical owner of a platform handling over \$300M in annual transactions. My most recent C# work is a 2-3 engineer rewrite of a brittle legacy document generation system into containerized ASP.NET Core microservices on .NET 8, with Datadog wired in for visibility from day one. I also built a self-service developer platform from scratch that replaced a 2-3 week provisioning process with a 2-hour one. I own things end to end, from the design doc through the part where they have to stay up.
Reliability & Observability	I instrument what I ship with Datadog metrics for failure rate, throughput, and latency, and use them to set clear bars for what healthy looks like. I like chasing hard production failures to root cause: a cancellation bug nobody could reproduce got fixed in days once I could replay real production data against it. To me reliability is part of the feature, not a follow-up.
AI-Assisted Development	I use AI coding assistants and agentic workflows every day, and I've formed real opinions on where they speed things up and where they quietly create work. I'm comfortable folding them into the development lifecycle and helping a team get good at using them well, with guardrails rather than blind trust.

Technologies

Backend Languages	C# / .NET (ASP.NET Core, .NET 8), Java / Gosu (JVM), TypeScript, Python, Node.js, Bash
Architecture & APIs	RESTful APIs, OpenAPI, Microservices, Event-Driven Architecture, API Versioning
Cloud & Infrastructure	AWS (Lambda, EKS, EC2, RDS, S3, SQS, IAM, ECR), Terraform, Kubernetes, Docker, Azure DevOps, Azure Artifacts
Databases	PostgreSQL, SQL, Aurora/RDS, Data Modelling, Redis
Testing	NUnit, Moq, JUnit, TDD, Test Framework Design
Observability	Datadog, Elasticsearch, Kibana, Metrics Design, SLOs, Alerting
CI/CD & Automation	CI/CD, GitHub Actions, Jenkins, GitOps, Feature Flags, Infrastructure as Code
AI-Assisted Development	Claude Code, Cursor, GitHub Copilot, Agentic Workflows
