EDMONTON, AB T5J 3N9

Staff Software Engineer

Dear Hiring Manager,

I'm applying for the Staff Software Engineer role at Jobber. The opportunity to lead technical initiatives, mentor engineers, and shape product direction as both architect and builder aligns with the work I've been doing for the last few years.

I've spent 10 years in software engineering, with the last 3 in technical leadership and architecture. I designed and own systems serving 5 teams with 99.9% uptime processing \$4.3M in transactions. I built a self-service developer platform that reduced environment provisioning from weeks to 2 hours, adopted by 15 engineers across 3 teams. I also architected AWS infrastructure for a product handling 2.8 million events that won a 2024 Guidewire Innovation Award. I use AI tools (Cursor, ChatGPT, Copilot) daily to accelerate development while maintaining code quality and craft.

My background is backend and infrastructure focused: Python, Java, TypeScript, and C# on AWS with Postgres, Redis, and Elasticsearch. I design scalable architectures, build microservices on Kubernetes, and create platforms that multiply team effectiveness. I don't have production experience with React, React Native, or Ruby on Rails, which I know are part of your stack. I learn quickly and am comfortable picking up new technologies, but I want to be upfront about where my depth is.

I lead through technical vision, mentorship, and hands-on work. I set standards for a 12-person team through RFC authorship and code reviews. I'm a member of our Architecture Steering Committee and have led cross-team initiatives. I balance technical excellence with pragmatic delivery, and I care deeply about building solutions that create real customer impact.

The teams that interest me most are Subscription Infrastructure and Harbour Foundations. Both focus on backend systems, scalability, and building foundational platforms that others build on top of, which is where my experience and passion align.

I'd be happy to discuss how my architecture and platform engineering experience could contribute to Jobber's growth.

Sincerely,

Tyler Kuipers
