About Me

I've spent 10 years building software, with the last 3 focused on shaping architecture and technical direction for a 12-person engineering team. I write RFCs, lead architecture decisions, and sit on our Architecture Steering Committee, but I stay hands-on: writing code, debugging production issues, and shipping features. I can help drive technical strategy, set standards that stick across teams, and mentor engineers while still shipping. I work well in Python, TypeScript, and Java on AWS and Kubernetes. I am hoping to find senior/staff level roles where I can provide meaningful direction and guidance to the team.

Work Experience

Alberta Motor Association

Edmonton, Alberta

SOFTWARE ARCHITECT

Jan 2023 - Present

- Set technical direction for 12-person engineering team on enterprise insurance platform (\$300M+ ARR, 180K policies). Author RFCs, drive architecture decisions, member of Architecture Steering Committee.
- Lead cross-team technical initiatives: drove error handling and API design standards adopted by multiple teams. Review and approve architectural proposals across the organization.
- Architected multi-account AWS infrastructure for award-winning product (2024 Guidewire Innovation Award). Event-driven system processing 2.8M events with 99.9% uptime. (TypeScript, Python, Lambda, Terraform)
- Led migration from legacy C# monolith to containerized microservices on EKS. Directed 2-3 engineers, built Datadog observability (metrics, alerts, dashboards), significantly improved system reliability. (Kubernetes, Helm, Docker)
- Built developer platform enabling 15 engineers across 3 teams to self-serve environment provisioning (60x faster). (Python, Terraform, AWS)
- Own 4 REST APIs serving 5 internal teams and external partners. Design contracts and versioning strategy. (TypeScript, Python, OpenAPI)

Arterys Inc. (Acquired by Tempus Labs)

Calgary, Alberta (Remote)

SOFTWARE DEVELOPER

Aug 2021 - Aug 2022

- Built and maintained backend services for SaaS medical imaging platform. Focus on low latency and reliability. (Node.js, TypeScript, AWS)
- Diagnosed and resolved performance bottlenecks using Redis caching and AWS infrastructure tuning.
- Monitored production via Elasticsearch and Kibana. Caught and fixed issues before they hit customers.
- Code reviews and testing for team contributions.

Alberta Motor Association

Edmonton, Alberta

SOFTWARE DEVELOPER | SOFTWARE TEAM LEAD

Jun 2018 - Feb 2021 | Feb 2021 - Aug 2021

- Designed and built automated test framework from scratch that reduced defects by 30% on subsequent releases. Framework adopted org-wide, still in use 4+ years later. (Java/Gosu, JUnit)
- Led 5-6 person team using TDD. Delivered on time with no critical defects post-launch. Code reviews, mentored junior developers, collaborated with product stakeholders.
- Led Git migration for 12-15 developers. Created Docker image for local dev environments.

Pleasant Solutions

Edmonton, Alberta

SOFTWARE DEVELOPER

Jan 2018 - Jun 2018

- Built HMI for a concrete plant control system using TDD. (C#)

Lockheed Martin Canada

Halifax, Nova Scotia

SOFTWARE ENGINEER ASSOCIATE

Jan 2017 - Jan 2018

- Contributed to Data Fusion module for Combat Management Systems, combining real-time data streams from multiple sensor sources. (Java, SQL)
- Designed and implemented scenario recorder system for capturing and replaying test scenarios, improving debugging and test coverage.

The King's University

Edmonton, Alberta

SOFTWARE DEVELOPER/RESEARCH ASSISTANT

May 2014 - Sep 2016

- Built web application for spatial/temporal data visualization. (JavaScript, PostgreSQL, PHP)

Education

Skills

Technical Strategy & Architecture	Shape technical direction for engineering teams. Write RFCs, drive architecture decisions, participate in steering committees. Balance long-term vision with practical delivery.
Cross-Team Leadership	Lead initiatives spanning multiple teams. Set standards others follow (API design, error handling). Communicate technical concepts to engineers and non-technical stakeholders. Mentor through pairing, code reviews, and design feedback.
Enterprise-Scale Systems	Build and operate systems handling high-value workloads (\$300M+ ARR). Multi-account AWS architectures, microservices on Kubernetes (EKS), event-driven pipelines. 99.9% uptime with Datadog observability.
Hands-On Execution	Stay in the code while leading. Build developer tooling, debug production issues, ship features. Created platform adopted by 3 teams (60x provisioning improvement), test framework still in use 4+ years later.

Technologies

Languages	Python, TypeScript, Java, Bash, C#
Cloud & Infrastructure	AWS (Lambda, EKS, EC2, RDS, S3, SQS, IAM), Kubernetes, Docker, Terraform, Helm
Architecture	Distributed Systems, Multi-Account/Multi-Tenant, Event-Driven, Microservices, REST APIs
Observability	Datadog, Elasticsearch, Kibana
Databases	PostgreSQL, Aurora/RDS, Redis
